Key qualifications

Antonis Mavropoulos has been involved in EU funded and Development Assistance projects relevant to environmental protection and resource management for 25 years in 30 countries, working with both the public and the private sector. He is well-known for his innovative approaches to environmental problems that integrate social and economic dimensions, as well as for his work on IND4.0. He has worked with many governments, he has drafted several laws and directives for waste management and he has invented the Waste Atlas and designed several information systems and mobile apps for resource recovery purposes. His recent book "Industry 4.0 and Circular Economy" (co-authored with Anders Waage Nilsen) deals with the dynamics between the on-going fourth industrial revolution and the challenge of circular economy. Several of his works have been translated into Arabic, Chinese, Hindu, Italian, Portuguese, Romanian, and Spanish and a lot of them can be found on-line at his blog <https://wastelessfuture.com>
